

Dear Sol-PCB Customer:

The enclosed documentation on the Sol-PCB and PM-5204 printed circuit boards includes the following information:

- 1) five Sol schematic diagrams
- 2) complete revised parts list
- 3) assembly drawings for Sol & PM
- 4) S-100 Bus specification
- 5) memory allocation table

- 6) I/O port allocation
- 7) control and status bit definition
- 8) user switch option selection table

Many of the mechanical parts for the Sol Terminal Computer are hard to obtain, so we have made available the following items:

Item No.	Price	Includes
Sol-CONKIT	\$59.00	Jl through Jll connectors, personality
		module card guides, card guide brackets
		and handle bracket.
So1-PRELIM	14.00	Preliminary Sol manual describing
		assembly and checkout procedures,
		plus much additional information.
		Very helpful when bringing up Sol.
Sol-SS	40.00	IC socket kit

We have sent the source listing for the CONSOLtm Personality module software to INTERFACE AGE magazine. This article is currently expected to be published in the December 1976 issue but publication schedules can vary. The CONSOL software allows the Sol to be used as a stand-alone computer system or as a terminal. The following commands are implemented:

BASIC (executes at zero)	DUMP (in hexidecimal)
ENTER (in hexidecimal)	TERM (terminal mode)
EXEC (at hex address)	TLOAD (load memory from cassette)

The Sol-PCB boards sold for \$40 each are warranteed for thirty days against defects in materials and workmanship. The warranty is void if, in the opinion of PTC, the printed circuit board has been abused during assembly. Warranty is limited in any case to replacement of defective printed circuit boards.

Processor Technology can <u>not</u> provide direct support via telephone or letter to Sol-PCB purchasers. The documentation provided should be sufficient to easily build and debug a Sol unit. NOTE: please do not make parts substitutions!

If you are in any way dissatisfied with your unassembled Sol-PCB please feel free to return it to us postpaid for a full refund.

Have fun!

- Note 1: Many pins not specified here are used in EIA RS-232C specification. USE THEM WITH CAUTION.
- Note 2: Terminals output on pins 2,4 & 20 and input on pins 3,5 & 6 for EIA type hookups. Modems and computer mainframes output on pins 3,5 & 6 and input on pins 2,4 & 20.
- Note 3: Current loop hookups are the same for terminals, modems, mainframes.

Due to layout errors connections to pins 28, 73 and 74 have been interchanged. These signals are used by DMA and interrupt devices. Correction requires three cuts and installation of three jumpers. Use 24 gauge wire supplied with the kit for these changes.

- 1. Cut trace on rear side of board connecting pin 1 of U45 with feedthrough directly below. Install jumper wire on rear side of board connecting pin 1 of U45 with pin 73 of J11.
- 2. Cut trace connecting the feedthrough adjacent to pins 13 and 14 of U64 with the feedthrough directly above (on rear side of board). Install jumper wire as shown on the rear side of the board.
- 3. Cut trace on front side of the board connecting the feedthrough immediately below and to the left of the "Jll" designation with pin 73 of Jll. Install a jumper wire from this feedthrough to pin 28 of Jll on the rear side of the board.

front (component) side
